

122. Best Time to Buy and Sell Stock II

Solved

Medium Topics

You are given an integer array `prices` where `prices[i]` is the price of a given stock on the i^{th} day.

On each day, you may decide to buy and/or sell the stock. You can only hold **at most one** share of the stock at any time. However, you can sell and buy the stock multiple times on the **same day**, ensuring you never hold more than one share of the stock.

Find and return *the maximum profit you can achieve*.

Example 1:

Input: `prices = [7,1,5,3,6,4]`

Output: 7

Explanation: Buy on day 2 (price = 1) and sell on day 3 (price = 5), profit = 5-1 = 4.
Then buy on day 4 (price = 3) and sell on day 5 (price = 6), profit = 6-3 = 3.
Total profit is 4 + 3 = 7.

Example 2:

Input: `prices = [1,2,3,4,5]`

Output: 4

Explanation: Buy on day 1 (price = 1) and sell on day 5 (price = 5), profit = 5-1 = 4.

</> Code

Java Auto

```
1 class Solution {
2     public int maxProfit(int[] prices) {
3         int profit = 0;
4         for (int i = 1; i < prices.length; i++)
5             if (prices[i] > prices[i - 1]) {
6                 profit += prices[i] - prices[i - 1];
7             }
8     }
9     return profit;
10 }
11 }
```
