169. Majority Element

Solved Easy  Topics 

Given an array `nums` of size `n`, return *the majority element*.

The majority element is the element that appears more than $\lfloor n / 2 \rfloor$ times. You may assume that the majority element always exists in the array.

Example 1:

Input: `nums = [3,2,3]`**Output:** 3

Example 2:

Input: `nums = [2,2,1,1,1,2,2]`**Output:** 2

Constraints:

- `n == nums.length`
- `1 <= n <= 5 * 104`
- `-109 <= nums[i] <= 109`
- The input is generated such that a majority element will exist in the array.

</> Code

Java   Auto

```
1 public class Solution {
2     public int majorityElement(int[] nums) {
3         int candidate = 0;
4         int count = 0;
5
6         for (int num : nums) {
7             if (count == 0) {
8                 candidate = num;
9             }
10
11             if (num == candidate) {
12                 count++;
13             } else {
14                 count--;
15             }
16         }
17         return candidate;
18     }
19 }
```
