

88. Merge Sorted Array

Solved

Easy

Topics

Hint

You are given two integer arrays `nums1` and `nums2`, sorted in **non-decreasing order**, and two integers `m` and `n`, representing the number of elements in `nums1` and `nums2` respectively.

Merge `nums1` and `nums2` into a single array sorted in **non-decreasing order**.

The final sorted array should not be returned by the function, but instead be *stored inside the array* `nums1`. To accommodate this, `nums1` has a length of `m + n`, where the first `m` elements denote the elements that should be merged, and the last `n` elements are set to `0` and should be ignored. `nums2` has a length of `n`.

Example 1:

Input: `nums1 = [1,2,3,0,0,0]`, `m = 3`, `nums2 = [2,5,6]`, `n = 3`

Output: `[1,2,2,3,5,6]`

Explanation: The arrays we are merging are `[1,2,3]` and `[2,5,6]`.

The result of the merge is `[1,2,2,3,5,6]` with the underlined elements coming from `nums1`.

Example 2:

Input: `nums1 = [1]`, `m = 1`, `nums2 = []`, `n = 0`

Output: `[1]`

Explanation: The arrays we are merging are `[1]` and `[]`.

</> Code

Java Auto

```

1 class Solution {
2     public void merge(int[] nums1, int m, int
3         //base case
4         if(nums1 == null || nums1.length == 0
5             return;
6     }
7
8     //vars
9     int p1 = m - 1;
10    int p2 = n - 1;
11    int p3 = m + n - 1;
12
13    //logic
14    while(p1 >= 0 && p2 >= 0){
15        if(nums2[p2] > nums1[p1]){
16            nums1[p3--] = nums2[p2--];
17        }
18        else{
19            nums1[p3--] = nums1[p1--];
20        }
21    }
22    while(p2 >= 0){
23        nums1[p3--] = nums2[p2--];
24    }
25 }
```
