876. Middle of the Linked List

Solved Easy  Topics 

Given the `head` of a singly linked list, return the *middle node of the linked list*.

If there are two middle nodes, return **the second middle** node.

Example 1:

Input: `head = [1,2,3,4,5]`

Output: `[3,4,5]`

Explanation: The middle node of the list is node 3.

Example 2:

Input: `head = [1,2,3,4,5,6]`

Output: `[4,5,6]`

Explanation: Since the list has two middle nodes with values 3 and 4, we return the second one.

</> Code

Java  Auto

```
1 /**
2  * Definition for singly-linked list.
3  * public class ListNode {
4  *     int val;
5  *     ListNode next;
6  *     ListNode() {}
7  *     ListNode(int val) { this.val = val; }
8  *     ListNode(int val, ListNode next) { thi
9  * }
10 */
11 class Solution {
12     public ListNode middleNode(ListNode head)
13         if(head == null || head.next == null)
14             return head;
15     }
16
17     ListNode dummy = new ListNode(-1);
18     dummy.next = head;
19     ListNode slow = dummy;
```
