26. Remove Duplicates from Sorted Array

Solved 

Easy

 Topics Hint

Given an integer array `nums` sorted in **non-decreasing order**, remove the duplicates **in-place** such that each unique element appears only **once**. The **relative order** of the elements should be kept the **same**.

Consider the number of *unique elements* in `nums` to be `k`. After removing duplicates, return the number of unique elements `k`.

The first `k` elements of `nums` should contain the unique numbers in **sorted order**. The remaining elements beyond index `k - 1` can be ignored.

Custom Judge:

The judge will test your solution with the following code:

```
int[] nums = [...]; // Input array
int[] expectedNums = [...]; // The expected answer with correct length

int k = removeDuplicates(nums); // Calls your implementation

assert k == expectedNums.length;
for (int i = 0; i < k; i++) {
    assert nums[i] == expectedNums[i];
}
```

</> Code

Java  Auto

```
1 class Solution {
2     public int removeDuplicates(int[] nums) {
3         if(nums == null || nums.length == 0){
4             return 0;
5         }
6         int n = nums.length;
7         int j = 1;
8         int count = 1;
9         for (int i = 1; i < n; i++) {
10             if(nums[i] == nums[i-1]) {
11                 count++;
12             }
13             else {
14                 count =1;
15             }
16             if (count <= 1){
17                 nums[j] = nums[i];
18                 j++;
19             }
20         }
```
