

27. Remove Element

Solved Easy  Topics   Hint

Given an integer array `nums` and an integer `val`, remove all occurrences of `val` in `nums` **in-place**. The order of the elements may be changed. Then return *the number of elements in `nums` which are not equal to `val`*.

Consider the number of elements in `nums` which are not equal to `val` be `k`, to get accepted, you need to do the following things:

- Change the array `nums` such that the first `k` elements of `nums` contain the elements which are not equal to `val`. The remaining elements of `nums` are not important as well as the size of `nums`.
- Return `k`.

Custom Judge:

The judge will test your solution with the following code:

```
int[] nums = [...]; // Input array
int val = ...; // Value to remove
int[] expectedNums = [...]; // The expected answer with correct length.

// It is sorted with no values
// equaling val.

int k = removeElement(nums, val); // Calls your implementation

assert k == expectedNums.length;
```

</> Code

Java   Auto

```
1 class Solution {
2     public int removeElement(int[] nums, int
3         if (nums.length == 0) return 0;
4
5         int j = 0;
6         for (int i = 0 ; i < nums.length; i++
7             if (nums[i] != val){
8                 nums[j] = nums[i];
9                 j++;
10            }
11        }
12        return j++;
13    }
14 }
15
16
17
18
19
```
