80. Remove Duplicates from Sorted Array II

Solved

Medium

Topics

Given an integer array `nums` sorted in **non-decreasing order**, remove some duplicates **in-place** such that each unique element appears **at most twice**. The **relative order** of the elements should be kept the **same**.

Since it is impossible to change the length of the array in some languages, you must instead have the result be placed in the **first part** of the array `nums`. More formally, if there are `k` elements after removing the duplicates, then the first `k` elements of `nums` should hold the final result. It does not matter what you leave beyond the first `k` elements.

Return `k` after placing the final result in the first `k` slots of `nums`.

Do **not** allocate extra space for another array. You must do this by **modifying the input array in-place** with $O(1)$ extra memory.

Custom Judge:

The judge will test your solution with the following code:

```
int[] nums = [...]; // Input array
int[] expectedNums = [...]; // The expected answer with correct length

int k = removeDuplicates(nums); // Calls your implementation
```

</> Code

Java Auto

```
1 class Solution {
2     public int removeDuplicates(int[] nums) {
3         int k = 2; // First two elements are
4
5         // Edge case: arrays shorter than 2 n
6         if (nums.length <= 2) return nums.len
7
8         for (int i = 2; i < nums.length; i++)
9             // Only write if current element
10            // the element two slots back in
11            if (nums[i] != nums[k - 2]) {
12                nums[k] = nums[i];
13                k++;
14            }
15        }
16
17        return k;
18    }
19 }
```
